d3.js Exercise 4

Creating a Treemap

Treemaps are good for comparing categories of things composed of smaller data points. Treemaps make it easy to compare both the main category's total value and the value of its children. When there are too many categories, a stacked bar chart can become difficult to use for meaningful comparisons, so a treemap can be a good alternative.

An example of a treemap is presented below:

More info about treemaps in d3.js can be found here.

Task: Create a treemap of the electricity production of 6 countries. The sources of production are specified for each country.

Data: The CSV file is attached in this exercise.

Deadline:

Monday, May 06, 2024 (23:59)

Marks: 10
